**CIP, PLC IS A COMPANY
IN THE SECTOR OF CIVIL
ENGINEERING
AND PUBLIC
CONSTRUCTIONS
OPERATING SINCE
MARCH, 25 1998.**

Presentation

At start based on a family structure and locally implanted, CIP, PLC exhibited, particularly in the last decade, a regular and sustained growth which allowed the company to become well established at national level and able to respond to the challenges of the market.

Anticipating and accompanying the evolution of the sector where it operates, CIP aims at achieving the objectives it permanently sets itself.

The constant articulation of factors such as experience, technical skills, respect of deadlines, innovation and dynamism, and the adoption of a wise policy of human resources as well as the guarantee of high ethical standards, of concern for the environment and for health and safety at work are some of the bases on which is founded the growing prestige of CIP, PLC in their sector of business.

The company tries in this way to maintain a lasting relation of partnership with all agents in the market, grounded on a permanent and true culture of quality.

Certification

The implementation process started in March 2007 and certification, according to referential NP EN ISO 9001, was awarded in June 2008. Prevention, permanent self-assessment and the continuous improvement of methods and means allowed the implementation and certification processes to be completed in scarcely over a year.

The continuous process of improvement, prevention of pollution and promotion of safety and health procedures, supported by certification since 2008, make it possible for the company to respond to the challenges of the market.

CIP, PLC has always assumed its status as a company that prizes the integral fulfilment of the clients' demands, but that does so in strict respect of the environment and of the health and safety of our workers.
